Data Flow Diagram

Date	03.10.2026
Team ID	SWTID-2026-5957
Project Name	Implement Client Script & UI Policy (Incident)
Maximum Marks	2 Marks

Data Flow Diagram

Create a Data Flow Diagram (DFD) to show how data moves through your system - between external entities, processes, and data stores. Use the symbol legend below as a guide.

DFD Symbol Legend

Symbol	Name	Description
Oval / Rounded shape	**External Entity**	A person, organization, or system outside the project that sends or receives data (e.g., Customer, Payment Gateway).
Rectangle with numbered header	**Process**	An activity that transforms incoming data into outgoing data (e.g., Validate Request, Process Order).
Rectangle (solid fill, no number)	**Data Store**	A place where data is held for later use (e.g., Customer Database, Inventory).
Labeled arrow	**Data Flow**	The movement of data between entities, processes, and data stores, labeled with what data is being passed.

Technology Stack & Justification

The following technologies are selected to support the Incident Client Script and UI Policy implementation within the ServiceNow ecosystem:

Technology	Justification
JavaScript (Client-Side)	Enables dynamic form behavior, field validations, and asynchronous glide ajax calls directly within the Incident form interface.
ServiceNow UI Policy Engine	Provides a declarative, no-code mechanism to dynamically set field visibility, mandatory states, and read-only attributes based on form conditions.

ServiceNow GlideForm (g_form) API	Essential API library for client-side scripts to manipulate form fields, display field messages, and control user interactions on the Incident table.
ServiceNow Incident Table (Schema)	Acts as the core data store housing incident records, configurations, and field attributes processed by client policies.
