Solution Requirements

Date	03.10.2026
Team ID	SWTID-2026-5957
Project Name	Implement Client Script & UI Policy (Incident)
Maximum Marks	4 Marks

Define Functional and Non-Functional Requirements:

Create a comprehensive list of requirements to define exactly what your solution will do and how well it will perform.

- **Functional Requirements (FR)** define specific behaviors, functions, or features of the system (What the system should *do*).
- **Non-Functional Requirements (NFR)** specify the criteria that judge the operation of a system, rather than specific behaviors (How the system should *be*).

Fill out the descriptions and necessary details for each category provided below.

Step 1: Functional Requirements (FR)

S.No	Requirement Category	Requirement Description	Priority (High/ Medium/Low)
1	Authentication	Verify user credentials via ServiceNow SSO/login module to ensure authorized access to the Incident management console.	High
2	Authorization levels	Enforce role-based access control (itil, admin) to restrict incident creation, script modifications, and UI policy configurations.	High
3	External interfaces	Integrate with ServiceNow REST APIs and system update sets to transfer client scripts and UI policy payloads.	Medium
4	Transactions processing	Handle asynchronous GlideAjax data exchanges and form submission transactions to validate incident fields instantly.	High
5	Reporting	Generate execution logs, audit trails, and compliance reports on client script triggers and UI policy state changes.	Medium
6	Business rules, etc.	Execute client-side scripts and UI policies conditionally when incident priority, category, or state fields are altered.	High
7	Compliance to laws or regulations	Adhere to ITIL v4 standards and enterprise data privacy policies governing incident management records.	High
8	Other	Support debugging utilities via browser console and ServiceNow script debugger for rapid troubleshooting.	Low

Step 2: Non-Functional Requirements (NFR)

S.No	NFR Category	Requirement Description	Target Metric / Acceptance Criteria
1	Performance & Speed	Ensure instant execution of client scripts and UI policies upon form load or field value changes without noticeable lag.	e.g., Client script execution completes in < 0.5 seconds

2	Scalability	Support concurrent incident record creations and multi-user form modifications across organizational departments.	e.g., Supports up to 10,000 concurrent user sessions
3	Security & Data Privacy	Secure incident data transmission using HTTPS/TLS encryption and restrict script execution privileges to authorized roles.	e.g., End-to-end AES-256 encryption and role-based ACLs
4	Reliability & Availability	Maintain continuous availability of the ServiceNow instance and incident form components during business operations.	e.g., 99.9% uptime per month
5	Usability & Accessibility	Provide clear field error messages, intuitive UI policy behaviors, and accessible form layouts for all support agents.	e.g., Complies with WCAG 2.1 AA standards
6	Other	Ensure code modularity and maintainability for future client script enhancements and UI policy updates.	e.g., High maintainability index and clean script comments
