Technology Stack

Date	03.10.2026
Team ID	SWTID-2026-5957
Project Name	Implement Client Script & UI Policy (Incident)
Maximum Marks	2 Marks

Define Your Technology Stack:

Identify the programming languages, frameworks, databases, front-end tools, back-end tools, and APIs that you will use to build your solution. A well-chosen technology stack ensures that your application is scalable, maintainable, and aligned with your project requirements.

Fill out the table below to detail the specific technologies chosen for each component of your architecture and provide a brief justification for your choice.

Technology Stack Details

S.No	Architecture Component / Layer	Technology Chosen	Justification / Purpose
1	**Frontend / Client-Side** *(e.g., React, Angular, HTML/CSS)*	ServiceNow Client Scripts (JavaScript) & UI Policy Engine	Enables real-time form behavior, dynamic field visibility, and instant client-side validations on the Incident form interface.
2	**Backend / Server-Side** *(e.g., Node.js, Python/Django, Java)*	ServiceNow Server Scripting (Business Rules & Script Includes)	Processes server-side data validations, asynchronous GlideAjax requests, and workflow triggers securely within the Now platform.
3	**Database / Data Storage** *(e.g., MySQL, MongoDB, PostgreSQL)*	ServiceNow Incident Table (Schema) & Relational DB	Provides robust relational storage for incident records, user profiles, configuration items, and system policy definitions.
4	**Cloud / Hosting / Deployment** *(e.g., AWS, Azure, Heroku, Docker)*	ServiceNow Cloud Platform & Update Sets	Ensures seamless cloud deployment, environment migration, and version control of scripts via enterprise update sets.
5	**Version Control & CI/CD** *(e.g., GitHub, GitLab, Jenkins)*	Git & ServiceNow Studio Integration	Facilitates collaborative script development, branch management, and repository synchronization for incident applications.
6	**Third-Party APIs / Other Tools** *(e.g., Stripe, Twilio, Google Maps)*	ServiceNow GlideForm (g_form) & GlideAjax APIs	Provides essential API libraries to manipulate form elements, query server data asynchronously, and control user interactions.
