Problem-Solution Fit

Date	03.10.2026
Team ID	SWTID-2026-5957
Project Name	Implement Client Script & UI Policy (Incident Management)
Maximum Marks	5 Marks

Problem-Solution Fit Canvas:

Use the framework below to ensure your proposed solution accurately addresses the root causes, behaviors, and limitations of your target audience. Fill out the canvas in the respective boxes just like the original visual template.

1. CUSTOMER SEGMENT(S) [CS]

IT Service Desk Agents, Incident Managers, and Enterprise Support Engineers handling daily IT service interruptions.

6. CUSTOMER LIMITATIONS [CL]

EG. BUDGET, DEVICES [CL]
Strict adherence to ITIL service standards, limited time during high-severity incident resolution, reliance on standard desktop browser environments.

5. AVAILABLE SOLUTIONS PROS & CONS [AS]

Pros: Native ServiceNow form validations.
Cons: Manual form checks are prone to human error, slow response times, and inconsistent field visibility.

2. PROBLEMS / PAINS + ITS FREQUENCY [PR]

Agents frequently miss mandatory incident details, leading to improper categorization and delayed triage. Frequency: Multiple times per shift.

9. PROBLEM ROOT / CAUSE [RC]

Lack of real-time client-side field validation and dynamic form behavior, allowing incomplete or invalid records to be submitted to the Incident table.

7. BEHAVIOR + ITS INTENSITY [BE]

Agents bypass optional-looking fields under pressure, causing data inconsistency and compliance failures during audits. Intensity: High.

3. TRIGGERS TO ACT [TR]

New incoming high-priority incident records or updates to incident priority, category, and state fields requiring immediate validation.

10. YOUR SOLUTION [SL]

Tech Stack: JavaScript, ServiceNow Client Scripts (onChange/onSubmit), UI Policies.

Justification: JavaScript provides robust client-side execution logic; ServiceNow Client Scripts enable real-time field validation and interactivity without server roundtrips; UI Policies dynamically enforce field visibility, mandatory status, and read-only attributes seamlessly.

8. CHANNELS OF BEHAVIOR [CH]

ONLINE
ServiceNow Service Portal, Agent Workspace, Standard ITIL Incident Form UI.

OFFLINE
N/A (Cloud-based ITSM operations).

4. EMOTIONS BEFORE / AFTER [EM]

Before: Frustrated, rushed, stressed by manual checks.
After: Confident, efficient, assured of data accuracy and compliance.

ADDITIONAL WORKFLOW METRICS

Ensures 100% data integrity on incident submission and reduces mean time to resolve (MTTR).
