Project Title	Implement Client Script & UI Policy (Incident Management)
Maximum Marks	5 Marks

Project Proposal (Proposed Solution) Report

The proposal report aims to streamline and automate IT service desk workflows by implementing robust Client Scripts and UI Policies within ServiceNow Incident Management. It tackles system inefficiencies, ensuring better operational accuracy, minimized user entry errors, and enhanced data integrity. Key features include dynamic form field visibility, real-time client-side validations, and conditional mandatory rule enforcement without server roundtrips.

Project Overview	
Objective	The primary objective is to enhance incident data quality and accelerate agent triage by configuring dynamic UI policies and client-side scripts to enforce required fields and govern form behavior.
Scope	The project comprehensively covers the ServiceNow Incident form interface, including onChange, onSubmit, and onLoad client script logic, as well as condition-based UI policies.
Problem Statement	
Description	Manual form submissions often suffer from missing information, incorrect categorization, and lack of real-time validation, leading to delayed resolution times and compliance gaps.
Impact	Resolving these issues will result in improved data compliance, reduced Mean Time to Resolve (MTTR), smoother ticket routing, and higher overall IT support productivity.
Proposed Solution	
Approach	Utilizing ServiceNow's native JavaScript APIs, Client Scripts, and UI Policies to dynamically alter form field states, validate user inputs instantly, and enforce data standards.
Key Features	- Real-time client-side field validation. - Dynamic visibility and mandatory toggles via UI Policies. - Error prevention upon incident submission.

Resource Requirements

Resource Type	Description	Specification/Allocation
Hardware		
Computing Resources	CPU/GPU specifications, processor cores	Standard Developer Workstation (Intel Core i5 / 8 Cores)
Memory	RAM specifications	16 GB RAM
Storage	Disk space for code, logs, instance cache	512 GB SSD
Software		
Frameworks	ServiceNow Development Framework	ServiceNow ITSM (Tokyo / Utah / Washington release)
Libraries	Client-side scripting libraries	JavaScript (ES5/ES6), GlideForm (g_form), GlideUser (g_user)
Development Environment	IDE & Instance Studio	ServiceNow Studio / Visual Studio Code
Data		
Data	Source, size, format	

		ServiceNow Incident (incident) Table Schema, Test Incident Records (JSON/ CSV)
