Coding & Solution

Date	03.10.2026
Team ID	SWTID-2026-5957
Project Name	Implement Client Script & UI Policy (Incident)
Maximum Marks	5 Marks

Coding & Solution

This section evaluates the quality and completeness of your implemented code and the overall solution. Your submission should demonstrate working functionality, clean code practices, and alignment with your defined requirements.

Instructions:

1. Ensure your code is well-structured, commented, and follows best practices for your chosen technology stack.
2. The solution should address the core problem statement and implement the key functional requirements.
3. Include all source files, configuration files, and setup instructions needed to run the application.
4. Attach or link to your code repository (e.g., GitHub) in the table below.

Solution Summary

Field	Details
Repository Link / URL	https://github.com/rifana09/-Implement-Client-Script-UI-Policy-Incident-
Programming Language(s)	JavaScript (ES6+)
Framework(s) Used	ServiceNow Client Script API, UI Policy Engine, GlideAjax
Key Features Implemented	Dynamic field validation, conditional mandatory rules based on state/priority, auto-population of caller details, and form error notifications.
Pending / Incomplete Features	None. All core requirements and edge cases have been successfully implemented and tested.
Setup / Run Instructions	1. Import the update set XML into the ServiceNow developer instance. 2. Navigate to Incident Form > Client Scripts & UI Policies to verify rule execution. 3. Test form behavior across different incident states and priorities.

Code Quality Checklist

S.No	Criteria	Status (Yes / No)
1	Code is modular and organized into functions / classes	Yes
2	Meaningful variable and function names are used	Yes
3	Code includes comments / documentation where necessary	Yes
4	Error handling is implemented for critical operations	Yes
5	The application runs without critical errors	Yes
6	Code is committed to a version control repository	Yes

Additional Notes / Comments:

The solution strictly follows ITIL incident management standards and ServiceNow best practices. All client-side scripts are optimized for performance with asynchronous GlideAjax calls to prevent browser freezing, and UI policies ensure seamless form behavior across desktop and mobile views.
