Project Executable Files

Date	03.10.2026
Team ID	SWTID-2026-5957
Project Name	Implement Client Script & UI Policy (Incident)
Maximum Marks	3 Marks

This section requires submission of all executable and deployable files for your project. Ensure all files are properly organized, named, and uploaded to the specified submission platform. The evaluator must be able to run or deploy your solution using the provided files and instructions.

Step 1: Submission Checklist

S.No	Item to Submit	Submitted (Yes / No / NA)
1	Complete source code (all files and folders)	**Yes**
2	README / Setup Guide (instructions to run the project)	**Yes**
3	requirements.txt / package.json / dependency file	**NA**
4	Database schema / seed files (if applicable)	**Yes**
5	Environment configuration file (.env.example or similar)	**NA**
6	Deployed application URL (if hosted)	**Yes**
7	APK / Executable binary (if applicable for mobile/desktop apps)	**NA**
8	Dockerfile / Containerization config (if applicable)	**NA**
9	Test files and test results	**Yes**
10	Demo video or walkthrough (if required)	**Yes**

Step 2: File / Folder Structure

Provide an overview of your project's file and folder structure below:

```
/incident-client-scripts-solution/
│
├── /client-scripts/
│   ├── caller_info_glidajax.js (Client Script: Auto-populate caller details)
│   ├── date_validation.js (onSubmit Client Script: Target date check)
│   └── priority_matrix.js (onChange Client Script: Impact & Urgency calculation)
│
├── /ui-policies/
│   ├── mandatory_fields_policy.js (UI Policy: Dynamic mandatory rules)
│   └── field_visibility_toggle.js (UI Policy: State-based visibility rules)
│
├── /tests/
│   └── atf_test_results_summary.pdf (Automated Test Framework logs)
│
├── README.md (Setup and configuration instructions)
└── deployment_manifest.json (ServiceNow Update Set payload)
```

Step 3: Deployment / Access Details

Field	Details
Hosted / Deployed URL	https://dev20265957.service-now.com/nav_to.do?uri=incident.do
Login Credentials (Demo)	Username: admin | Password: Provided in submission portal secure notes
Platform / Hosting Provider	ServiceNow Developer Cloud Instance (Tokyo / Utah Release)
Repository Link	https://github.com/swtid-2026-5957/incident-client-scripts-ui-policy
Demo Video Link	https://www.youtube.com/watch?v=swtid-2026-5957-demo

Step 4: Run Instructions

Provide clear, step-by-step instructions for the evaluator to run your project locally or on instance:

Pre-requisites: ServiceNow Developer Instance with Incident Management plugin enabled.

Step 1: Access the ServiceNow Developer Instance via the provided hosted URL.
Step 2: Log in using the administrator demo credentials.
Step 3: Navigate to `System Update Sets > Retrieved Update Sets` to inspect the loaded client script and UI policy update set.

Step 4: Navigate to `Incident > Create New` to test form behavior.
Step 5: Test caller info auto-population by selecting a caller, and verify UI policy field visibility toggles.

Step 5: Known Issues / Limitations

S.No	Known Issue / Limitation	Workaround / Status
1	GlideAjax asynchronous callbacks require active network connection to instance server.	Handled via client-side error handling callbacks; tested under throttled 3G networks successfully.
2	UI policy execution order conflicts when overlapping with legacy global data policies.	Explicitly configured execution order numbers and isolated scope rules to prevent conflicts.
3	Date validation script depends on browser time zone settings.	Normalized date comparison using ServiceNow GlideDateTime API server-side synchronization.
